How steel wheels are made

How to make steel wheels. How are steel car wheels made.

This article Â© about making wheels. For the structure of the wheels, check the wheel, Æ Creating the wheel wire spokes, see the criminal. Some of the sources listed in this article may not be trusted. Please help this article looking for better and trusted fonts. Not confident quotes Å æ Å œ can be challenged or deletes. (August 2017) [Learn how & when to remove this message template] A construction Æ the wheel design of aluminum wheels refers to the fabrication Æ wheels. The construction of the Æ wire spokes wheels Å usually called Creating Æ the vehicles, so that the construction of the Æ wheel refers Å construction of the wheels on the Æ wire , and . wheels of cars and other heavier vehicles. The wheels Å Æ o construçãdas in a wide variety of designs using different materials, but Inácio ÅÅ © XXI century, the aluminum and sÅ ÅAço the most often used with aAsso wheels being heavier and more durÁveis Å Å than aluminum alloys. The performance of a wheel depends on the alloy and ta Åcnica used to build it. [1] A wheel Æ generally made of a border which connects with the tire, and a central disc, known as m © tambor disk or spider, which connects the wheel to the vehicle. [2] The wheels Æ ÅA the generality of two types: Semi-Drop Center (SDC) used to A in caminhÃes and Drop Center (DC), used in other vehicles. [2] story of the construction of the Æ wheels ÅA the history of the wheel itself. The oldest known wheel was the wheel of Ur in Mesopotamia, invented around 3500 BC. [4] The earliest known use of the wheel for the transport carriages © mesopotÁ in hÁ averages about 3200 years. [4] egAprios developed wheels with spokes about 2000 years afterArÁs, followed by European hÁ about 1400 years. [4] Another source says that the oldest wheel used for transportation, with a 27.5-inch radius (70 centimeters), was discovered in 2002, about 12 km (20 km) southwest of Ljubljana, EslovÁnia, and it is believed to be 5200 years. [5] n © Æ construction of all the wheel Used Parts Ánica Most sÅ Æ wheels the wheels Ánica Used Parts made using the fundiÁsa Æ, forging, ring rolling and / or poor © all high light. [1] FundiÁsa Æ Æ into the fundiÁsa, the wheels sÅ Æ made using a mold. The mold filled with molten metal estÁj: As the metal cools, the wheel becomes strong and rÁgida. VÁrios fundiÁsa types of processes result in the Æ wheels with different properties. FundiÁsa Å the severity and Æ fundiÁsa the low rush Sa Æ the common types of fundiÁsa Å Æ. [1] Gravity FundiÁsa Æ Æ in the fundiÁsa by gravity. © metal poured into a mold and only gravity causes the molten metal to fill the mold. This method all © Å simple and low cost, but the spear aluminum this manner in the Æ serÁj tÁ dense as with other mA © all of the fundiÁsa, construçãdas wheels by this mA © whole sÅ Æ o therefore made slightly heavier for equivalent forÅsa. [1] FundiÁsa the low Æ rush into this mA © throughout the molten aluminum into molds ÅA pumped at high velocity, which increases the rush Æ formaÅsa and prevents the bubbles. FundiÁsa the low rush Æ ÅA © most common type of fundiÁsa the wheel because of forÅsa and quality of the material. [1] Rim-rolling mA © whole fundiÁsa Å simple and Chisel laminaÅsa of special sÅ Æ ÅA used for the build wheels. The desired wheel © Æ shaped heating a porÁsa Å the external, a rush provided Æ rotating the unfinished wheel, and the wheel sculpting using specialized rollers. This METHER ALL A similar wheel in quality to forged wheels, but at a lower cost. OEM wheels (original equipment manufacturers) built by this all are used in special performance vehicles. [1] High light technology this method is used for Light wheels of racing vehicles. In this method, the material is compressed using rolls along low pressure aluminum barrel, which gives it the shape and shade required. [Necessary Quoting] Method of two or three pieces, also known as multi wheels -piece are assembled of pieces built separately by the Meton mentioned above. Screws or welding, or both, can be used - Å
