## Pdf with lock symbol

Depending on your files you can set many options (most of them can be combined!)- You can select particular pages, rotate PDF pages, reorder pages, split files and much more (just have a look at the buttons right of the selected file)- A PDF protection for printing, copying and editing is removed automatically (without password). For read-protected PDF files the correct password is required.- Many other options can be defined, like header/footer, layout and compression.Templates:Page (x) of (y)(x) of (y)Page (x)(x)2021-06-23(file)(file).(ext) SAY NO to PDF Unlocking Programs! PDF Page Lock Prevents Secured PDF Documents from being Cracked or Decrypted by PDF Unlocking Programs/Services! Please click following 3 screenshots, which shows you how does the PDF Page Lock lock and hide the page 2 in the sample PDF file. The 1st screenshot shows you the PDF file in the PDF reader/viewer program. Anyone could access the content before locking and hiding the page. The 2nd screenshot shows you the PDF file in the PDF reader/viewer program after the page 2 was locked. The content on the page 2 could not be displayed anymore. The 3rd screenshot shows you the PDF file in the PDF reader/viewer program after the page 2 was hidden. You can only access other pages because the page 2 could not be seen anymore. There are instances where you might want to keep certain important pages of your PDF documents locked or hidden. PDF Page Lock is an easy software which will allow you to do exactly that. To keep sensitive pages stored invisible or locked, please download PDF Page Lock. Select version: macOS Big Sur 11.0 macOS Catalina 10.15 macOS Mojave 10.14 Modifying this control will update this page automatically You can give a PDF a password that everyone must enter to open the file. The password is used to encrypt the file.Open Preview for meTo remove a password from a PDF you encrypted, open the PDF and export it again, this time turning off the encryption option. Thanks for your feedback. Security can be set to restrict access to the PDF or to require a password for modification. Some functions, such as splitting the document or extracting pages, cannot be performed without first breaking its security and doing so will revert the PDF to an unsecured state. Some actions, such as certifying or digitally signing a document, automatically secure it. This process can be performed on multiple PDFs at the same time. PDFs do not need to be open in Revu when the process is run. If a document is open in Revu, any changes resulting from the process will be made to the document, but the document will not be saved or checked in (if relevant); the user will need to save and check in the document manually. If a document is not open in Revu, and it is not checked out/locked by another user, changes will be applied and saved to the document automatically (without opening the document in Revu). The Security icon on the Navigation Bar shows the current security settings of the active PDF. Click it for complete security details. In general, the icons indicate the following security states: No security is defined. Password is required to open the document. Printing and editing are limited. Password is required to open the document and printing and editing are limited. Viewing PDF Security While the icon visible in the Navigation Bar shows the current security settings of the active PDF, you might want to see more details that one icon can give you. To view more information about a PDF's current security settings: Open the desired PDF. Go to Document > Security or click the Security icon on the Navigation Bar. The Document Properties dialog box, open to the Security tab, appears. The current security settings are shown. To change any of these settings, click Change Permissions and enter the PDF's password (if required). See Changing Permissions below for more information. Changing Permissions There are several ways to access PDF security. Do any of the following:Go to Batch > Security.Go to Document > Security, then click Change Permissions on the PDF Security dialog box that appears.Go to Document > Document Properties, then select the Security tab and click Change Permissions on the PDF Security dialog box that appears.Click the Security icon on the Navigation Bar, then click Change Permissions on the PDF Security dialog box that appears.Select Change Permissions from the Security menu on the Navigation Bar.The PDF Security dialog box appears. The active PDF, if any, is automatically added to the process. To add more PDFs, use one or more of the following methods: Files: Adds individual files from a network or local drive. Selecting this option will cause the Open dialog box to appear. Selecting this option will cause the Open dialog box to appear. Navigate to the appropriate location and select the desired files. Open Files: Adds all files currently open in Revu. Open Set: Adds all files contained in the current Set. Folder: Adds all files in a selected folder on a network or local drive, but not files contained in any of its subfolders. Selecting this option will cause the Select Folder dialog box to appear. Navigate to the desired folder and select it. Folder and Subfolders: Adds all files in a selected folder on a network or local drive as well as all files within any of its subfolders. Selecting this option will cause the Select Folder dialog box to appear. Navigate to the desired folder and select it. To use a saved security configuration, select it from the Preset menu. To define a new security configuration, set one or both of the available passwords as described below (see Security Configurations for more information about the effects of the available combinations):If you wish to require a password to open the PDF:Select Require Password to Open the Document.Enter the password in the Open Password field.Enter the password again in the corresponding Confirm field. If the passwords do not match, the OK button will not be available.If you wish to enable editing and/or printing of the PDF:Select Enable Permissions to Limit Printing and Editing.Enter the password in the Master Password field. This password will grant users who possess it access to all editing and printing functions; all other users will be limited to the functions selected below the password fields.Enter the password again in the corresponding Confirm field. If the passwords do not match, the OK button will not be available.Set the permissions for users who do NOT have the Master Password by selecting from the available options. Users with the Master Password will have access to all the normal functions within Revu.If you wish to encrypt the PDF, select an option from the Encryption menu. The options are arranged in order of complexity, from simplest to the most complex. In general, choose the most secure encryption type that is compatible with the recipients' PDF reader. All three encryption types can be opened by Revu Windows version 10.1 and later and Revu Mac.To save this configuration for later use, see Saving and Applying Quick Security Settings below. Click Save at the bottom of the dialog box. The new security configuration will not go into effect until the PDF is saved. Saving and Applying Security Configurations Security settings may be saved so that the same settings can easily be used again when applying security to other PDFs. To save a security configuration: Set the desired permissions as described in Changing Permissions above. Click Save to the right of the Preset menu. The Save Document Security Policy dialog box appears. Enter a name for this configuration and click OK. To apply a saved security configuration: Open the desired PDF. Select the desired security configuration from the Security menu on the Navigation Bar. Security Configurations When defining a security configuration there are two passwords that can be set. It is not necessary to set both if this is not desired. When deciding which configuration to use, consider the following: Open password only Users will be prompted for the password when trying to open the PDF. Even with the password, no user will be able to edit or print the PDF. Previews of the PDF will be obscured. Any user who can open the PDF will be able to access and change the document's security settings. Master password only Users will not be prompted for a password when opening the PDF. Actions available to users are determined by the options selected under Set Permissions on the PDF Security dialog box. Previews of the PDF are not obscured. Users will be prompted for the password when trying to access the document's security settings.Accessing the document's security settings will also bypass any permission limitations established under Set Permissions for the user. For example, if Allow Changes was unchecked, users would normally be unable to make any changes to the PDF. However, a user with the Master password can use it to open the document's security settings, causing Revu to recognize them as a document owner and granting them full access to all functions. Both Open and Master passwords Users will be prompted for the password when trying to open the PDF. Either password will work. Functions available to users who enter the Open password are determined by the options selected under Set Permissions on the PDF Security dialog box. Users who enter the Master password automatically have access to all, normal Revu functions. The Master password is required to access the document's security settings. Previews of the PDF are obscured. Help Guide Revu 20 Security If you are working on a file with other collaborators, be sure to lock files before opening them with Box Edit. This will prevent other users from making changes to documents that you are working on until you unlock the file. Locking files is not currently supported on our mobile applications. From the Web Application To lock a file from the Box webapp: Right-click a file (or click the ellipses (...)) to open the More Options menu. Click Lock Choose a duration for the lock. If you choose unlimited, the file will be locked until you unlock it manually. You can also choose to prevent users from downloading the file while you are editing it. A lock icon to the left of the file's name will indicate that the file has been locked. If you use Box Sync, you will also see a lock icon over the file icon in your Box Sync folder. To unlock a file from the Box webapp: Right-click a file (or click the ellipses (...)) to open the More Options menu. Click Unlock From Your Desktop With Box Sync You can also lock and unlock files directly from your desktop using Box Sync. To lock a file, right click on the name of the file in your Box Sync folder, navigate to Box Sync, and select Lock. A lock icon will appear over the file icon to indicate that the file has been locked. When you lock a file from your desktop, a lock icon indicating that the file is locked will also appear to the left of the file's name in the web application. Once you have finished your work, simply right click on the name of the locked file, navigate to Box Sync, and select Unlock. If you forget to do so, any other collaborator who has editing capabilities is also able to unlock the file. If you need to concurrently edit a document, you can use our Office Online integration to collaborate on Microsoft Office documents in real-time. Box Notes and Google Documents can also be edited with others in real-time. From Box Edit To lock a file from Box Edit/Tools: Click Open with ... A prompt will pop up stating that Box is launching your file within the native application chosen. Choose the blue text "Lock file to prevent others from editing it". Select the dropdown next to duration in order to choose how long to lock the content. You can also choose Disable Download From Box for Office In Office, if you open a document via Box for Office, the content will be opened and Locked automatically. Once you select which content you would like to open: On the Home tab you will see in the upper right hand corner an icon which lists "Locked" upon opening the content. When the content you have opened to edit is closed, the content will no longer be locked. From Box Drive To lock a file from Box Drive, please follow the steps below. If you do not see the option to lock the file, make sure you are on the most recent version of Box Drive: Locate the file you would like to lock in your Box Drive folder structure. Right-click on the file. In the menu that appears, select Lock File. To unlock, right-click the file and select Unlock File. Submit a request RECOMMENDED: Download this tool to help you safely fix common Windows errors & optimize system performance automaticallyProtecting your hard drives can help prevent unwanted access and adds more security to your data. Windows allows encryption of files and folders through the Encryption File System or EFS. Once your drives are encrypted, you will see a padlock or lock icon on your drives.Pro and Enterprise editions of Windows 10 has a BitLocker feature that puts drives in a locked state and encrypt them for added protection. EFS is not as strong as BitLocker but works efficiently too. When you encrypt your files and drives, no one is allowed access to them unless decrypted using your Windows user account password. Why is There a Padlock or Lock Icon?When you see a padlock or lock icon on your files, it only means that these files have extra protection and not shared with anyone. In some cases, users modify their sharing options or security features hence the padlock icon appears. The lock icon allows users to identify the files or drives that are encrypted and those that are not.How to Unlock Folders with Lock Icon?You will need your BitLocker password to unlock the lock icon. Click on the drive or folder that you want to access. You will be asked for the password. Simply type in the password and the padlock icon will unlock. Folders with unlock icons means that their protection is temporarily suspended so you do not need to enter the password to access.How to Remove Padlock or Lock IconMethod 1 – Change Your Permission SettingLocate the folder, file, or drive that you want to modify.Right click to open drop down menu and choose Properties.Next, look for the Security tab and select Edit.Check the list of users or groups with defined permission to the drive and see if you are in the list of if it defines Everyone.If not, click Add. If you are in the list, click Allow Full Control.Then, click OK.To double check if the changes were applied, type your user or group name and click Check Names. The results will show the name of your computer and your user or group name. Click OK since changes were applied.If the results show a Name not Found error, repeat the process of adding your user or group name.Under the Security/Permissions window, choose the user or group you added and check the Full Control option.Click OK to apply the changes.Method 2 – Turn Off EFSSelect the file, folder, or drive and right click to open drop down menu.Click Properties.Locate Advanced and click to open.At the bottom, make sure the Encrypt contents to secure data is unchecked.Click OK and see if the icon has been removed.Method 3 – Disable Your BitLocker.Locate the drive that you want to disable your BitLocker.Right click to view drop down menu and click Manage BitLocker.Once inside the BitLocker Drive Encryption, look for the Turn Off BitLocker option at the lower right side and select.A confirmation window will appear. Click Turn off the BitLocker button to confirm turn off process.Wait for the process to end and close window.How to Resume your BitLocker ProtectionResuming your BitLocker Protection will lock the padlock icon after you have unlocked it for user access. If you want to resume the protection, follow the steps below.On the drive that you want to change, right click and look for the Resume BitLocker Protection button.Click to initiate the changes.Restart your computer and see if the padlock or lock icon has been removed.ConclusionAdded protection on your files is important in case of online hacks and unwanted access. However, if you do not need added security to some of your files or drives, you can remove the padlock icon using the methods above. Was the article helpful?
