## Log shipping in sql server interview questions

Question: What sÅ È o necessÃ¡rias the ports to set up log shipping? A: I thought it would be easy to find that the internet, but it seems that does the È was the tÃ È easy as I thought. Enta È o, in this blog, aprenderÃamos on necessÃ¡rias doors to log shipping. One of my clients was trying to set up log shipping in a highly secure environment where most things are expected blocked or restricted. To ensure that the È configuraÃ all applications is smooth, the Security / Network requested ports that need to be unlocked. As a DBA, they were concerned about log shipping as they used extensively. If the firewall is configured between the primary server and a standby server You will need to open the following ports on the firewall: Port 1433 Ã ¢ ~ "This port Ã ¢ Necessary for operaÃApes between Urges ¢ TRENDS È Padra the. this port must be open on the primary server and the standby server. If you are using a urges ¢ INSTANCE named SQL server, ther open the port used by the Calls ¢ named INSTANCE. I personally suggest that you choose the door is tica instead of a door Dina ¢ 135 mica.port "This port Ã ¢ Required for SQL agent can copy backup files from transaÃApes log to the shared folder on the server espera.Ports 137, 138 or 139 and 445. ¢ ~ ¢ "These ports sÃ È obliged to use the acÃApes of the nomeaÃÃ convenÃÃ È È uniform (UNC). These sÃ È of the ports that need to be Ãnicas open for log shipping, how you'll be between a firewall, you Tamba ¢ m want to create firewall exceÃApes to use SSMS tool like VOCA ¢ estarÃ¡ using to set up log shipping. Other services and Windows applications may require additional ports to abertas.Reference: Final Dave ( ) 1. What ediÃÃ È supports the log shipping? SQL Server 2005 Ã ¢ ¢ ~ "Enterprise, Standard and Workgroup SQL Server 2008 Ã ¢ ¢ ~" Enterprise, Standard, Web and Workgroup SQL Server 2008 R2 - DataCenter, company, Padra È o, web and SQL Server Workgroup 2012 ¢ ~ "Enterprise, Business Intelligence, Standard and Web 2. Who can set up log shipping Members of the SysAdmin Fixed Server funÃÃ È the database system concepts Interview Questions 3. Model recovery È necessÃ¡rios in the log Shipping Model of recovery È paid or the mass 4. What work sÃ È o created in log shipping the primary server? - backup job in Pebble secundÃ¡rio - copy, restore and alert Tutorial concepts 5. If the log shipping database system database work automÃ¡tico supports failover? NÃ È o, only supports failover manual. IDMS (Integrated database Management system) 6. interview Questions login can be transferred atravÃ ¢ s manual failover? NÃ È o, you need to create logins and usuÃ¡ rivers in secundÃ¡rio server. 7. secundÃ¡rio Server Types? Reset mode and stand by the È consultation RelatÃ¡rio so structured (SQR) Interview Questions 8. Difference between reset mode and the È stand by mode in Log Shipping? How to reset the È - Database estÃ¡ in reset mode the È. You do the È can access the database. Stand by Mode - The database estÃ¡ in nÃ³ read-only. You can select data from the database. This database can be used to relatÃ¡rio purposes. 9. What sÃ È o the benefits of log shipping? Easy to setup / maintain easy Easy to configure failover can be vÃ¡rios secundÃ¡rios servers can be configured with the mirroring or replicaÃÃ È. Questions replicaÃÃ interview È SQL Server 10. What sÃ È o the disadvantages of log shipping? Need to manage each database separately in the È automÃ¡tico supports failover. The logins È o can be automatically moved 11. What system database storage related record My Information? MSDB SQL Server DBA Interview Questions 12. What Ã ¢ the difference between sending log 2000 and 2005? The 2005 log shipping uses the server To communicate between primary, monitor and secondary servers. For 2000, check the primary, monitor and secondary server connectivity. Please note, always check the remote connections are enabled on all servers. Concepts of the Database System Interview questions 13. How to monitor logging? RELATORS - Transaction Transport Transport Standard 3rd Tool Party SQL Server System Stored Tables and Procedures 14. 14. Time to shop? 15 minutes 15. Full form of TUF? Transaction Undo Oracle Real Archive Application Clusters Interview Questions 16. List of Tables Used in Log Submission? Tables primary server: Log\_shipping\_primary databases, Log\_shipping\_monitor\_primary, log\_shipping\_monitor\_error detail, log\_shipping\_monitor\_alert Tables secundÃ¡rios servers: Log\_shipping\_secondary databases, Log\_shipping\_monitor\_secondary, Log\_shipping\_monitor\_error\_detail, Log\_shipping\_monitor\_alert, Log\_shipping\_monitor\_history\_detail, Log\_shipping\_secondary 17. backup can be compressed sending Log In? Yes, SQL Server 2008 in front of database replication questions 18. How to troubleshoot logging problems? Check the error log for the problem check problem, copy and restore the work history. Check Log Shipping Standard Report IDMS (Integrated Database Management System) Interview Questions Single Update: 29-01-2020 | Displays: 71 Total number of linked links: 10 Are you looking for interview questions on logging in SQL Server 2008? Now get all access to your account in a click using the official links below: Tags: Interview questions in logging in SQL Server 2008 ^ What are the parent-plays to set the log shipping? SQL Server 2005 or Back Pattern, Workgroup or Corporate Editions must be installed on all server instances involved in logging. Servers involved in logging should have the same case sensitivity settings. The database must use the complete recovery or bulk-registered recovery model a shared folder to copy SQL Server Agent log backup files must be configured correctly in which logging Can the recovery template be configured? Log sending works with the integral and bulk recovery template. Is it possible to configure logging on the database server with different groupings? No. Is it possible to configure the lower version logging for the upper version and vice versa? Yes, it is possible to configure smaller log sending to the upper version. But it is not possible vice versa. What SQL Server editions are the sending of available log? 2012 "Enterprise, Business Intelligence, Standard and Web 2008R2 Ã ¢ ¢ ¢" Datacenter, Company, Pattern, Web and 2008 Working Group "Enterprise, Norma, Web and Group 2005 - Enterprise, Standard and Workgroup Log Send in SQL Server 2000: Company, Developer Edition. Standard Edition - Simple Log Ripper Tool, which you can find in the Microsoft SQL Resource Kit Server 2000. server-2000-daptification Tuning / log-shipping-sql-server-2000. -part-1 Is it possible to register sending database between SQL 2000 & SQL 2005? No, this is impossible. in the transaction log architecture SQL 2005 is changed in comparison with SQL 2000 and therefore you can not restore SQL 2000 log backups to SQL 2005 or vice versa. We can configure logging between Different domains? Yes, we can set the shipment Log on the server that resides in different domains. To set up a log-freight, you must have SysAdmin rights on the server. Middle: What is the TUF file? Tuf Stands for Undo Transaction File. When you restore the backup log into the securely confirmed transactions from the secondary server, it reached the .tuf file. What will happen to logging if the TUF file is corrupted or lost? Log send will not work. We have to set up logging again. Can we make full backup of the log database sent on the secondary server? Non, we can not run the backup command against a log-sent database on the secondary server. We can back up the log data sent on the main server? Yes, it is possible. We can make the full backup of the database sent by log and this will not affect logging. Can we configure several secondary databases in the log shipping? Yes, we can set several secondary databases in the log shipping. Can we shrink the database log file sent? Yes, we can shrink the log file, but us Use with truncate option. If we use this option, obviously, the log shipment will be disturbed. If you create a job on the master database server, will it be automatically created on the secondary server or not? Non it will not be created on the secondary server. If you create a user in the main database, will it be automatically created in the secondary or not? Yes, it will be automatically created in the secondary database. What are the required permissions for logging? We must have SysAdmin on each server instance to configure logging. Which permissions are required for shared folders in primary and secondary for service accounts? For backup job, read / write permissions for the backup directory are required for the following account: SQL Server Service account on the main server instance. Proxy backup job account. By pattern, this is the SQL Server Agent account on the main server instance. For the copy work, the read permissions for the backup directory and the recording permissions for the copy directory are required by the Code Job Proxy account. By pattern, this is the SQL Server Agent account on the secondary server instance. For the restoration work, read / write permission for the copy of the copy is required by the following: The SQL Server Service account on the secondary server instance. The restoration work proxy account. By pattern, this is the SQL Server Agent account on the secondary server instance. How to failover secondary server, when the main server fails? If the main server is available, make the following steps. A) Take the tail of the primary server log if possible. b) Restore the log tail throughout the secondary d database c) Remove the Main Server Log Sending Configuration) Select any of the secondary server and bring online with the set Alternate database online e) Click the right mouse button on the main database and manage script for users and logins. F) Then move the script to the secondary server to create users and Logins g) Re-configure the log sending of the new server (secondary server) which are the errors that occurred in the log shipping ? There are two errors occurring during log shipping 1) 14420: - This error occurs when the backup job fails 2) 14421: - This error occurs when the christian failure work work: \*\*\*\*\* \*\*\*\*\* Problems \*\*\*\*\* 1. I'm getting the error message below at the restoration work on the secondary server, why? [Microsoft SQL-DMO (ODBC SQLSTATE: 42000)] Error 4305: [Microsoft] [ODBC SQL Server] [SQL Server] The log in this backup set begin on the LSN 7000000026200001, which is too late to sign up for database. An anterior log backup that includes LSN 6000000015100001 can be restored. [Microsoft] [ODBC SQL Server] [SQL Server] The restoration log is finishing abnormally. Answer: Is your SQL Server or agent restarted the day at any source or destination? Because the error affirms there is an incompatibility in LSN. A particular tran log has not been applied to the destination server. so the subsequent trans records can not be applied as a result! You can check the log shipping tables for tables logging to verify what the transaction log is applied to the last time to the secondary DB, if the next consecutive transaction logs are available In the Secondy Server Share folder, you manually restore the logs with the NORECOVERY option, once you restore the logs automatically from the next cycle that the work will work well. 2. I set up the logging successfully in the standby mode, but in the restoration work I am receiving the error below. What do I do to avoid this in the future? Message 2006-07-31 09: 54:33 \*\*\* Error: It was not possible to apply the log backup file ~ ~ ~ C: \ Program Files \ Microsoft SQL Server \ Mssql.1 \ Mssql \ backup \ logship \ test\_20060731131501.trnÃ ¢ , ~ ~ Ã ¢ " for secondary" test "database (Microsoft.sqlserver.management.logshipping) \*\*\* 2006-07-31 09: 40: 54.33 \*\*\* Error: Exclusive access Do not be able to be obtained because the database is in use. use.
