Download free: reactions: radix, mincanfly, hornyjon and another 152 can I use icons paid here? Without paying thanks for a wonderful Aqualax release! Source: Ara Wagoner / Central Android The way you organize themselves, organize, and interact with our applications on Android is called the startup program. The pitchers usually consist of a series of domestic screens, where we can organize shortcuts from apps and widgets and a drawer of app. Each phone comes with a launcher, but when the ball fall, there are endless third-party launchers that not only manage to take it back, but they throw away from the park. Everyone has their perfect launcher, but if you haven't found your favorite yet, then here there are some pitchers that we think satisfy users of all kinds. Source: Ara Wagoner / Central Android of Smart Launcher was around for years and years, but actually kicking things on a notch with Smart Launcher 5. The home screen has a modular positioning widget and modular system grid system Page, but the real show star here is still the app drawer. Smart Launcher 5 Automatically order your apps in different categories, and if you pay for Smart Launcher Pro, you can add your own custom categories and sort various drawer cards in a variety of ways, from the most used to install icon time of color. From a categorical and complete app drawer for some of the most precise positioning widget on the Android for the more different icon options on the market, Smart Launcher 5 has a lot of love. His gestures are of the highest level, too much, especially the short-touch shortcuts for dock applications, which works work better than App shot shortcuts use Nova and Action. Smart Launcher is also part of the Most Holy Trinity of the Rapid Tematization Home Screen that I used for the last three years, and has been used in ours Impressive Deadpool theme, NBA Finals Themes, renewed mermobili theme, and more topped topics. Simple configuration with simplified layout Drawer App cards is wonderful fastest startup to the top theme Home Application Gestures You may not place icons at the top of the initial screen premium system can be a source of confusion Simple configuration and wonderful widget pages with one Smart, a widely adaptable application drawer, crazy icon options through icon pack studio, and a simple Drop-Dead home screen, intelligent launcher 5 won my heart and my home screen. Source: Ara Wagoner / / Central Nova Launcher was an important player in the home screen longer than most of us even used Android. The reason for this continuous domain is simple. The mix of customization of the Nova, convenience and cunning is unparalleled. Nova allows your most pixel-y phone than a pixel and more touchwiz-zy than a galaxy and everything with ease and grace. It also allows you to build an initial screen that is unique, stable and solid while it's simple or beautiful as you would like. A large set of functionality allows Nova to reach all these wonderful themes and let users exactly build the home screen they want, with small but infinitely useful functions such as subgrinuous positioning and a robust backup system. For users use only third-party pitchers, the "Import from other launchers" function is the most coherent and reliable than Nova that almost every other launcher I tried in previous years. If you want to train from the basic launcher to a personalized experience, Nova can help you feel at ease with launcher layouts and themes. After being around so many years, the pitchers have a tendency to be inflated unless they get regular revisions to cut fat and maintain simple things and Nova Launcher is getting a revision of this type now. Nova Launcher 7 is the update of the Milestone in which the Launcher Nova moves to a newbase of codes with new features, more simplified integrations and that same utility and adaptability we expect from Nova. It's not yet available on Google Play, but you can get it on the Nova Launcher DiscoD channel for Testtero soon. Easy to import previous layout Layout Tonn of customization Customization options Large support and stability Buy first once and you are set for life All options can be overwhelming thematic can take a little reliable launch for masses if you want to build themes Complexes or you just want an intelligent launcher willing with excellent gesture checks, Nova is for you and your style. This is our best choice for anyone trying to start with a VPN. It offers a large mix of speed, reliability, exceptional customer service and convenience. There is a 30-day reimbursement guarantee, then give him a shot today. From \$ 6.67 a month at ExpressVPN Source: Ara Wagoner / Android Central The password of the action pitcher and its users is fast Æ Æ Æ Æ ~ "QuickTheme, QuickDRower, Quickpage, QuickBar. To ensure that it can Being the fastest and best pitcher for users who want to set all alone so, the Launcher action has taken on itself one of the most customizable pitchers on the market. From its robust gestual checks to its covers and omnipresent shutters to hide the folders and the widgets under app icons, the launcher action makes it easy to get the desired domestic screen. If the QuickTheme color palette is missing, now you can set the colors of the material palette or the colors of the custom hexadecimal code to get a look More cohesive! This was a lot of expected feature and makes the action pitcher much more useful for living users and wallpaper themes. Launcher Action is also rap IDO to support the functionality of the latest versions of Android, or what can be replicated on a third-party launcher. The Launcher Chris Lacy action developer is dedicated, dedicated, and is quick to jump on Android issues that affect third-party pitchers, such as problems with Android 10 gesture controls and third-party launchers. While the current thematic-building power here is not just as adaptable as a launcher of Nova, it is a launcher that works Well, fast to make you configure and on your way. Customize almost all great great gesture options Robust support is not so flexible as the Nova Launcher Premium / Plus system can get rapid confusion of the word and gesture gesture whether you want a launcher who is the peak of productivity o The height of sophistication, the action launcher and its many rapid features that can help you realize the configuration of your dreams. Source: Ara Wagoner / Android Central would think if it if He was about to wear a pitcher to Android, corresponded to Windows 10 or perhaps the old appearance of the Windows phone - and you would be wrong. Not only is Microsoft Launcher is a completely native Android experience, but it's a high quality launcher and always up to date. It is one of the few outside the NOVA launcher to offer edge and subgrinuous positioning widgets. The experience of Microsoft Launcher focuses around a clean home screen and a smart page on the left powered by your Microsoft account, your use of the daily phone and any Android widget you want to add. Even if you are not immersed in the Microsoft ecosystem, having a scrolling page of the widgets beating with space on over 3-4 pages. While the settings of this launcher are somewhat clunky, it has all the launcher options you want and then some. While Microsoft Launcher is definitely simple as Smart Launcher 5 or the Niagara launcher, it is still a fairly light launcher that is worth considering, especially if you have some kind of assignment on the microsoft ecosystem for work, school or personal use. Scrolling page BOD GOOD ENTERPRISE INTEGRATION The settings of the DEV team very active needs two-level dock refinement is strange integration and adaptability for the way you work you can customize most of the aspects of this quite adaptable launcher, but it is Even very easy to have the launch of going out your way and allow you to work. Source: Ara Wagoner / Android Central Niagara is still a new polished pitcher that has just left early access, but it has already become the following to be a lightning launcher ideal for low memory devices. It is also ridiculously simple to build themes around because it has only a layout. You can attack one or more widget at the top, you have a quick list of your favorite apps, then log in to the rest of your apps from the A-Z alphabet on the right side of the screen. The functionality set here is still quite small, but if you just want to find your apps quickly and go on with the day, the Niagara launcher is a rather large answer. It reminds me of a bit of the old Z pitcher for several years ago, if you remember the experimental nokia pitcher, but I think this is around for a while. Ridicly fast fast setting Drop-Dead Easy Interface Easy Limited layout options Gestures can sometimes overlap a layout, a super-fast app drawer. While you may not be able to spread all your apps and your widgets on five different screens, this sliding launch vertically is lightning fast and works well on the phones that the more inflated launchers start late. Source: Ara Wagoner / Android Central, all absolutely love the pixel launcher that Google develops and uses for Google Pixel phones, except that the pixel launcher has no real options for the home screen, the dock, the drawer of the App, or something else. LawnChair 2 is what we all would actually like the pixel launcher was: a full-bodied launcher with the look of Google clean, but the ability to do all the things we expect a pitcher to do in 2020: Automatic theme, Edge-to-widget -Edge, adjustable icon and grid size, folders and now also categorized app drawers. The Larschai has been around for a while, but the first version was left stagnant for months before the LAICO 2 has finally left beta towards the end of 2019. It is absolutely worth the wait, but we don't have too Given an update for the public lany in a little more than a year because the team behind went on an extended pause. Now they are building the Lackchair 3, but it is still in the early test phases, so we are not sure when it is available for Normal through Google Play. Easy and light customization Great Community for support Open-source Not in Active Development Color Picker & Category Settings could use the job cannot import from other launchers it's like the pixel launcher but actually deserving its hype while it may take longer for the laique to get updates, they always apply for the fantastic open source launcher I want to shipped with My first Launcher Love was Nova, but Smart Launcher 5 won my heart in 2018 and I didn't find anything but work for my theme lover configuration. The categorical app drawer is better than a large AZ sorting once you have your categories set the way you wish them, and the shortcuts of the double-tap apps do not interfere with the gesture navigation or scanning between the screens of the app drawer and the home screen as they do it on Nova, action and almost every other existing launcher. If you want a launcher to be more similar to the pitcher supplied with your phone, Nova Launcher is the best bet because it imports from other launchers more constantly than any other launcher I tried, allowing you to start with the configuration you already had and Then relax in more advanced functions as shortcut gestures and customize the appearance of folders, icons and search bars. Whatever these launchers, the beauty of a launcher test is that everyone has a free level that allows you to get a really good feeling for the launcher and how to run before unlocking extra feature with Pro updates. If you have a Stripped launcher Absolutely, you should absolutely buy the PRO key or contribute to developers so that they can continue to update that launcher and keep it alive. Developers must also eat! What happened to my gesture navigation? If you are on an Android 10 phone that is not in the latest patches, using something different from the default, the manufacturer's startup program on your phone will force you from the new Android 10 Gesture NAV back to Ugly Old Three-Butting Nav. This was a problem with the initial launch of Android 10, one who made third-party launchers suffer for Google's incompetence. Since then this problem has been solved for many phones, the first pixels and then the OnePlus phones and finally the Samsung phones with UI 2.5 updates and a UI 3.0. If you cannot use NAV Gesture with your new launcher, contact the manufacturer and ask what the holup is with the update. And once again, shame on Google for having never allowed a free version of Android to be shipped this way! SHAME! Source: Ara Wagoner / Android Central There are hundreds and hundreds of thrown out there, and while there are many good, they can not all make the cut. Here are the pitchers who could not make the cut: Evie Launcher is still a light launcher and easy, but is no longer in active development, which means that when bugs arise, there's no one to fix them. If you were / are you using Evie, Smart Launcher 5 test, the launcher Niagara or pear pitcher if you're on a phone with limited RAM. Hyperion Launcher continues to make progress, but it's just too damn buggy to advise stable and customizable launchers like Nova and Action. BlackBerry Launcher has not seen updates in a year and it's just too expensive to recommend to anyone who is not already a subscriber to active BlackBerry Hub. If you are a business user, Microsoft Launcher is probably fit and Microsoft Launcher for free. We could earn a commission for purchases using our links. Find out more. More.
