In this article, we're going to build and validate a small form on the web using HTML and PHP. The form © created using HTML, and the validation and processing of beautiful content Ahencs © made with PHP. The purpose of this article © teach you some basic HTML elements and how your data are accessible to you in your PHP scripts. The form that a we a priori will create contains © m a sound © input series: text fields, a rune button, a list of key options, a selection box and a submission button. These data will be validated to ensure that the user has provided a value for each of them. If one or more fields are empty, the form will be displayed again. This time, however, the empty fields will have the chain of errors.. Missingdort next to them. If none of the fields are empty, the given values will be displayed simply. You can find the clue for this article on GitHub. HTML Form Let< creates the HTML form. The design itself © for the company concerned OUR NEW WORLD OF FRUIT TOOLS. The form captures three things: The user is a priori@details (name, address, and e mail address) The user uses fruit (amount of fruit they eat per day, and their favorite fruit) If the user would like a free text fields brochure The name, address, The fields of email will be encowith elements of text and text such as this: Name
