## Free coin and spin in coin master

Little skill is involved in this game that’s all fluff, no substance. This app is a slot machine game disguised as an action-oriented viking game.For brainless zone out time, Coin Master is a match.Coin Master is a free slot machine playing game. It’s easy to learn and hard to put down. Play as a guest or connect to Facebook to play with your pals. Name your viking. The game doesn’t include random Viking names so type in your own Astrid or Arvid. Choose a cheery horned helmeted avatar to go with it.Playing Coin MasterYou’ll use slot machines to earn coins, attack, and raid other villages. That’s where the viking theme ends. Coin Master has no plot or story. The goal is to keep earning coins to build, improve, or repair your village and steal coins from your neighbor. If you’ve connected to Facebook, that neighbor you are stealing from could be your BFF.Collect coins by tapping on a slot machine. Three-in-a-row matches net you big wins. But you won’t always gain coins.An in-game tutorial gets you up to speed but the controls are easy enough you don’t need it. The build button transports you to the village shop. You’ll start by throwing down \$60,000 on a sweet little thatched house.Each item you build awards you one star. You need twenty stars to get to the next village level. As your item’s stars increase and bump up a level, your village will look less like something from How To Train Your Dragon after an attack. It will morph into something way more impressive. Gold statues, anyone?But it’s also pointless. Each level up opens a new type of village and they have nothing to do with vikings.Seeing starsHow do you get stars? Each hour, you will receive five free slot machine spins. These can accumulate so you don’t have to check in every hour. You can hold fifty spins total.When you spin the wheel, your slot machine win may not be a bundle of coins to plunk down on your next village upgrade. Spin a masked pig? Raid! You get to attack a Coin Master.The Coin Master is a friend (if you’ve connected to Facebook) or a random player with the most coins.Raiding is fast. Four different attack points are auto-highlighted in the cross-hairs. The game prompts you to ignore the cozy cabin and the reindeer, and directs your attention to the catapult. Destroy it with a tap and earn coins.Only three of the four points will contain coins. Choose well. You will dig three times hunting for your gold. When you finish, you’ll head back to the slot machine.By the hammer of ThorRoll Thor’s hammer and you’ll whisk away to a neighboring village. If you’ve connected Facebook, it could be your friend’s village or a random player. Attack the village or you can tap “Revenge” or “Friends” at the top of your screen.You can either bash and smash your friend’s village or view a list of the people who trashed yours. You’ll see a list of their names and how many stars they have so you can decide who is most worthy of your wrath. Sweet revenge is the best part of Coin Master.Your village isn’t immune from the fighting. You will lose a star from your total collected stars. Your village’s item will lose a star and revert to the previous level. Tap on “Fix” to put it right. If you spin a Viking shield, you earned your village automatic protection. The next attack will keep your village safe and earn the raider less coins. Too bad three shields are your max. You’ll see them accumulate at the top of your screen. If you roll extra shields, you’ll get to re-roll.With only three shields, and millions of players, your village won’t stay the way you left it. You will lose stars. As levels progress, it’s a frustrating process. You have to save money in order to upgrade your village, but you can’t upgrade with the frequent attacks.Why do stars matter? Stars keep rank and put you on the leaderboard. Earn one star for each upgrade in your village. Once you gain a high enough level, you can earn stars through collecting cards.Frequent paywalls are distracting and encourage you to spend money for faster leveling. It’s almost impossible to play without paying up.Card-collecting bonanzaWhere do you find cards? After you hit level 3, which is a slow grind, you can find cards in the chests of neighboring villages. The kind of village you are in will determine the type and rarity of the card you receive. Nine cards form each collection. Complete your collection for the number of stars displayed at the top of each card and other prizes, like free spins. You won’t get items for duplicates.Play long enough and you can unlock pets like a rhino, a fox, or a tiger. They don’t sit there and look pretty. Each type of pet offers a different village bonus.Where can you run this program?Download Coin Master for your Android phone or Apple products using iOS 9 or later.Is there a better alternative?Pirate Coin Master and Smash Island Crazy Cards offer the same cutesy graphics and coin-winning fun without the viking theme. There are still coin-stealing raids on the neighbors. Pirate Coin Master offers up different ships to build and cards to collect. Smash Island uses a wheel, not a slot machine, to spin and build your different islands. You can still attach your Facebook account so your friends can help you out (or not). These games are so close in style and mechanics. It boils down to whether you prefer one format of slot spinning and cheerful theme over another.Coin Master is mindless and repetitive button-tapping on the verge of entertainment. With the timed check-ins and fifty-spin limit, what should be a simple time-filler could turn into an all-day affair.Should you download it?No, it’s safe to skip Coin Master. Without even a basic story, there’s little point in investing time into this game. Driving on worn or bald tires is a huge safety hazard. Tire treads help your car maintain traction on wet or snowy roads. When treads are worn away, you’re likelier to lose control of the car, experience a blowout, or spin out in the snow. Stay safe on the road by letting Honest Abe check the tread on your car’s tires. Simply insert a penny, with Abraham Lincoln’s head upside down, into the tread on each tire. If you can still see his whole head, it’s time for a new tire. Your colorful new shower curtain looks great, but it keeps blowing in and clinging to you while you bathe—a common and annoying problem, particularly with lightweight shower curtains and liners. To keep the curtain in place, glue small stacks of coins to four or five large paper clips, and then slide the weighted clips onto the bottom of the shower curtain, spacing them evenly. Now you can shower without having to battle the curtain. Need to tighten up a loose screw, but don’t want to be bothered hunting down the screwdriver? No problem! Just pull a spare coin out of your pocket. Pennies and dimes are often thin enough to serve as makeshift screwdrivers. They’re also handy for prying up pop-tops on beverage or pet food cans. Penny tile is back in a big way for flooring, backsplashes, and tub or shower surrounds. While the term “penny tile” normally refers to ceramic tiles the size of a penny, some creative do-it-yourselfers have taken the term literally and have used actual pennies to fashion copper-colored floors, countertops, backsplashes, and tabletops. You’ll need a lot of pennies—250 to 275 per square foot, in fact—and a lot of patience to glue the coins into position. Once you’re done, cover the coins with clear epoxy to create a smooth surface and hold everything in place. Then get ready for compliments, because you’re going to get a lot of them. If you need a close-but-not-exact measurement—for example, if you want to know if the desk you’re eyeing at the thrift store will fit in the corner of your living room—but you don’t have a ruler nearby, just dig a quarter out of your wallet. At its widest point, the coin is almost exactly one inch across. While there’s no hard science to prove it, many gardeners swear by copper to repel ravaging slugs. Protect your delicate seedlings by surrounding them with a ring of pennies dated 1982 or earlier; coins produced during that era were 95 percent copper, while today’s pennies are made mostly of zinc. It is said that hungry slugs will get an unpleasant sensation, similar to an electric shock, when they try to cross the coins, and will then head elsewhere for their meal. Related: 8 Ways to Combat Garden Pests A wobbly table can sour even the most delicious dinner. For a quick, temporary solution, slide a small stack of coins underneath the offending table leg. For a permanent fix, superglue the coins into place. Everyone has experienced the frustration of a jar that just won’t open, leaving the contents tantalizingly out of reach and your hand and wrist sore. To the rescue: one thin dime. Just slip the coin under the edge of the lid, and gently twist the dime to break the jar’s vacuum seal. You might need to repeat in more than one spot around the lid, but once you hear the air release from the jar, you should be able to give the lid a good turn and remove it. Your sweetie just brought you a beautiful bouquet, and you’d like it to last as long as possible. To help extend the life of your cut flowers, drop a penny dated 1982 or earlier into the vase along with the water. Those old pennies were made mostly of copper, which is a mild fungicide. The metal will help cut down on the growth of mold and fungus in the water, so your flowers may be able to look their best a few days longer than they would without the penny. Whether you’re a lawn care novice or a master gardener, everyone can use a little help around the yard. Subscribe to The Dirt newsletter for tips, recommendations, and problem-solving tools that can help you tame your great outdoors. In this instructable I will explain how to make a cheap and funny little toy.For this you will need:-a SHORT pencil-a danish coin (5 KRONER preferably)-a pencil sharpener-super glueFirst you want to sharpen your pencil and then you need to insert the coin through the pointy side of the pencil.Note:make sure that the pencil isn't to heavy. To test this you want to be sure that when you try putting the assembly downthe top part of the pencil stays elevated. A good length for the pencil would be 7 cm.To make sure that the assembly stays together super glue the coin to the pencil. When you do this make sure that the coin is perpendicular to the pencil or else the top will not function correctly. Let the assembly dry for 5 minutes. To try your new spinning top find a hard flat surface and lay a white sheet of paper on it. Take your top and spin it as fast as possible.If you want to make cool drawings with it you can move the sheet of paper around to obtain funny lines and circles.Have fun. Published on May 18, 2021 We have two ears and one mouth for a reason—effective communication is dependent on using them in proportion, and this involves having good listening skills.The workplace of the 21st century may not look the same as it did before COVID-19 spread throughout the world like wildfire, but that doesn’t mean you can relax your standards at work. If anything, Zoom meetings, conference calls, and the continuous time spent behind a screen have created a higher level of expectations for meeting etiquette and communication. And this goes further than simply muting your microphone during a meeting.Effective workplace communication has been a topic of discussion for decades, yet, it is rarely addressed or implemented due to a lack of awareness and personal ownership by all parties.Effective communication isn’t just about speaking clearly or finding the appropriate choice of words. It starts with intentional listening and being present. Here’s how to improve your listening skills for effective workplace communication.Listen to Understand, Not to Speak There are stark differences between listening and hearing. Listening involves intention, focused effort, and concentration, whereas hearing simply involves low-level awareness that someone else is speaking. Listening is a voluntary activity that allows one to be present and in the moment while hearing is passive and effortless.Which one would you prefer your colleagues to implement during your company-wide presentation? It’s a no-brainer. Listening can be one of the most powerful tools in your communication arsenal because one must listen to understand the message being told to them. As a result of this deeper understanding, communication can be streamlined because there is a higher level of comprehension that will facilitate practical follow-up questions, conversations, and problem-solving. And just because you heard something doesn’t mean you actually understood it.We take this for granted daily, but that doesn’t mean we can use that as an excuse.Your brain is constantly scanning your environment for threats, opportunities, and situations to advance your ability to promote your survival. And yet, while we are long past the days of worrying about being eaten by wildlife, the neurocircuitry responsible for these mechanisms is still hard-wired into our psychology and neural processing.A classic example of this is the formation of memories. Case in point: where were you on June 3rd, 2014? For most of you reading this article, your mind will go completely blank, which isn’t necessarily bad.The brain is far too efficient to retain every detail about every event that happens in your life, mainly because many events that occur aren’t always that important. The brain doesn’t—and shouldn’t—care what you ate for lunch three weeks ago or what color shirt you wore golfing last month. But for those of you who remember where you were on June 3rd, 2014, this date probably holds some sort of significance to you. Maybe it was a birthday or an anniversary. Perhaps it was the day your child was born. It could have even been a day where you lost someone special in your life.Regardless of the circumstance, the brain is highly stimulated through emotion and engagement, which is why memories are usually stored in these situations. When the brain’s emotional centers become activated, the brain is far more likely to remember an event. And this is also true when intention and focus are applied to listening to a conversation. Utilizing these hard-wired primitive pathways of survival to optimize your communication in the workplace is a no-brainer—literally and figuratively.Intentional focus and concentrated efforts will pay off in the long run because you will retain more information and have an easier time recalling it down the road, making you look like a superstar in front of your colleagues and co-workers. Time to kiss those note-taking days away! Effective Communication Isn’t Always Through Words While we typically associate communication with words and verbal affirmations, communication can come in all shapes and forms. In the Zoom meeting era we live in, it has become far more challenging to utilize and understand these other forms of language. And this is because they are typically easier to see when we are sitting face to face with the person we speak to.Body language can play a significant role in how our words and communication are interpreted, especially when there is a disconnection involved. When someone tells you one thing, yet their body language screams something completely different, it’s challenging to let that go. Our brain immediately starts to search for more information and inevitably prompts us to follow up with questions that will provide greater clarity to the situation at hand. And in all reality, not saying something might be just as important as actually saying something.These commonly overlooked non-verbal communication choices can provide a plethora of information about the intentions, emotions, and motivations. We do this unconsciously, and it happens with every confrontation, conversation, and interaction we engage in. The magic lies in the utilization and active interpretation of these signals to improve your listening skills and your communication skills.Our brains were designed for interpreting our world, which is why we are so good at recognizing subtle nuances and underlying disconnect within our casual encounters. So, when we begin to notice conflicting messages between verbal and non-verbal communication, our brain takes us down a path of troubleshooting. Which messages are consistent with this theme over time? Which statements aren’t aligning with what they’re really trying to tell me? How should I interpret their words and body language?Suppose we want to break things down even further. In that case, one must understand that body language is usually a subconscious event, meaning that we rarely think about our body language. This happens because our brain’s primary focus is to string together words and phrases for verbal communication, which usually requires a higher level of processing. This doesn’t mean that body language will always tell the truth, but it does provide clues to help us weigh information, which can be pretty beneficial in the long run.Actively interpreting body language can provide you with an edge in your communication skills. It can also be used as a tool to connect with the individual you are speaking to. This process is deeply ingrained into our human fabric and utilizes similar methods babies use while learning new skills from their parents’ traits during the early years of development.Mirroring a person’s posture or stance can create a subtle bond, facilitating a sense of feeling like one another. This process is triggered via the activation of specific brain regions through the stimulation of specialized neurons called mirror neurons. These particular neurons become activated while watching an individual engage in an activity or task, facilitating learning, queuing, and understanding. They also allow the person watching an action to become more efficient at physically executing the action, creating changes in the brain, and altering the overall structure of the brain to enhance output for that chosen activity.Listening with intention can make you understand your colleague, and when paired together with mirroring body language, you can make your colleague feel like you two are alike. This simple trick can facilitate a greater bond of understanding and communication within all aspects of the conversation. Eliminate All Distractions. Once and for All As Jim Rohn says, “What is easy to do is also easy not to do.” And this is an underlying principle that will carry through in all aspects of communication. Distractions are a surefire way to ensure a lack of understanding or interpretation of a conversation, which in turn, will create inefficiencies and a poor foundation for communication. This should come as no surprise, especially in this day in age where people are constantly distracted by social media, text messaging, and endlessly checking their emails. We’re stuck in a cultural norm that has hijacked our love for the addictive dopamine rush and altered our ability to truly focus our efforts on the task at hand. And these distractions aren’t just distractions for the time they’re being used. They use up coveted brainpower and central processes that secondarily delay our ability to get back on track.Gloria Mark, a researcher at UC Irvine, discovered that it takes an average of 23 minutes and 15 seconds for our brains to reach their peak state of focus after an interruption. Yes, you read that correctly—distractions are costly, error-prone, and yield little to no benefit outside of a bump to the ego when receiving a new like on your social media profile.Meetings should implement a no-phone policy, video conference calls should be set on their own browser with no other tabs open, and all updates, notifications, and email prompt should be immediately turned off, if possible, to eliminate all distractions during a meeting.These are just a few examples of how we can optimize our environment to facilitate the highest levels of communication within the workplace. Actions Speak Louder Than Words Effective communication in the workplace doesn’t have to be challenging, but it does have to be intentional. Knowledge can only take us so far, but once again, knowing something is very different than putting it into action.Just like riding a bike, the more often you do it, the easier it becomes. Master communicators are phenomenal listeners, which allows them to be effective communicators in the workplace and in life. If you genuinely want to own your communication, you must implement this information today and learn how to improve your listening skills. Choose your words carefully, listen intently, and most of all, be present in the moment—because that’s what master communicators do, and you can do it, too!
