## How to pair an amazon echo dot

Echo Dots are small-sized and are easily portable, which makes them very easy to use. The Alexa system that comes in-built with the Echo devices has turned out to be excellent in terms of the many commands it follows smoothly.It has rapidly become popular due to its functions that people worldwide have found extremely useful in their daily lives. Not only the Alexa system following your commands and giving you the answers you are looking for but Echo Dots can also be used as Bluetooth speakers by pairing them with your smart devices.This article will take you through how to put an Echo Dot device in pairing mode and then get it connected to your pairing device. Image source: slashuiYou may also like: What is Sonos? Here's Everything You Need to Know About the Wireless Sound SystemSteps To Follow To Pair Your Echo Dot For The First TimeSuppose you want to pair your mobile or tablet with your Echo Dot. You have to go through a sequence of steps to connect the devices for the first time. If you want to connect your device later, it can be done using simple reconnecting steps.But remember, if you change your mobile device, then you have to go through the steps again as required to connect for the first time.Step 1 - Bring your mobile device and the Echo Dot nearby to each otherStep 2 - You must ensure that your Echo Dot is not already paired with another device. You can easily remove any connected Bluetooth device by simply commanding Alexa to do so by saying, "Alexa, disconnect."Step 3 - Next step is to go into your Bluetooth setting on your smartphone or tablet. Whether you use an Android device or an iOS device, you can activate your device's Bluetooth by turning on the Bluetooth option. This is fairly easy to do since the Bluetooth setting is easily accessible when you drag down the shortcut tiles on your home screen. You can also find the Bluetooth options in the Setting menu of your smartphone or tablet.Step 4 - Do a similar check on your smartphone or tablet if they are already connected to any other Bluetooth device. If so, disconnect the existing connections by clicking on the connected device name and choosing the DisconnectStep 5 - Some devices have an auto-setting due to which the device becomes undiscoverable by any new Bluetooth device. Disable this setting by going into the Bluetooth settings and turning on the Allow new connections option or Make your device discoverableStep 6 - Now, the next steps are to be executed on the Alexa application. Open the Alexa app and go to the Settings Here you will see an option named Device. Under this option, you need to select the Alexa-enabled device you want to pair with your smartphone. Select the Echo Dot that you want.Step 7 - Once you have selected the Echo Dot you want to pair, you will find the Bluetooth setting. By tapping on the setting, you will be shown the option of pairing a new device to the Echo Dot of your choice. Click on the Pair a New Device Once you do that, the Alexa app will start searching for nearby Bluetooth devices and show you the list of discoverable Bluetooth devices around you.Step 8 - Be on the lookout for the name of your device. As soon as the name of the device pops up on the list, click on the device name. Your job is done now as the Bluetooth systems on both the devices interact and get paired with each other for the first time. Image source: YoshinaYou may also like: Can Echo And Sonos Play Together?Steps To Follow To Reconnect Paired Device Or Disconnect OneOnce you have paired your Echo Dot with your Bluetooth device for the first time by following the above steps, you can give easy voice instructions to Alexa to reconnect the device or disconnect it. Here are the steps:Step 1 - Begin with waking up Alexa by calling out her name In case you have changed your settings, and your device responds to any other option than the default Alexa call, then use the same to wake up the device.Step 2 - Provide Alexa your command for pairing your Echo Dot with the previously paired Bluetooth device. If any Bluetooth device is in the vicinity of your Echo Dot but has been left unpaired with the Alexa app, then it will not be recognized by Alexa. The command is simple - "Alexa, pair Bluetooth". This will make Alexa run the Bluetooth system and identify any nearby device that had been previously paired with it. If both your tablet and mobile are paired with your Echo Dot, in that case, Alexa will attempt connecting to the one that was more recently paired with the Echo Dot.Step 3 - The next instruction that is important for you to know is how to connect to a Bluetooth device of your choice. For instance, suppose both your tablet and mobile are paired with your Echo Dot. The mobile was the more recent device that was paired, while the tablet was the first one to be paired. Under normal circumstances, when you command Alexa to pair with a Bluetooth device, it will pair with the mobile, in this case. However, suppose you want to connect it to the tablet instead. To do this, all you need to do is instruct Alexa to connect with the particular device specifically. So, your command should be "Alexa, pair with the tablet." However, in case you face any connectivity issue and commanding does not produce the desired result. You can simply go into the Alexa app and, under the Bluetooth settings option, choose the device you want your Echo Dot to get connected to.Step 4 - The final instruction that you need to know is for disconnecting any existing Bluetooth connection. Simply say, "Alexa, disconnect" or "Alexa, unpair." Alexa will ensure that any devices connected over Bluetooth get disconnected immediately from your Echo Dot device.Final TakeawayYou can connect your Echo Dot to any mobile device that supports Bluetooth connectivity easily using the instructions mentioned above. You can use the same instructions to also connect your Echo Dot to any other Bluetooth enable external devices such as high-quality speakers or wireless headphones,Just remember to always go to the Alexa app to manually select the settings in case of any issue with the voice commands. Now your job is to go to Amazon to choose the products that are right for you Share this post: on Twitter on Facebook on Google+ If you are looking at how to put Echo Dot in pairing mode and it's correct way, you are not alone. Many people, even tech-savvy people, are finding it a challenge to pair their Echo Dot to their phones, tablets, laptops, or PCs. In this guide, we will go deep, and we will teach you how to put Echo in pairing mode. Common Problems with Alexa Apart from the pairing problem, here are some other common problems that you might experience with any Alexa-enabled tool. Inconsistent Wi-Fi ConnectivityInability to Pair or Connect with Other DevicesCannot Connect to Bluetooth-Enabled DevicesDifferent Alexa Skill Shows UpAnd Others These are just some of the most common problems that you can experience with your Echo Dot device. Apart from these, there are other errors that you can stumble upon. However, those errors would either need technical support or would require you to perform a factory reset on Alexa. Without further ado, let us learn how you can link your speaker to your gadgets and hardware at home! How to Put Echo Dot in Paring Mode So, let us learn how to pair Echo Dot. The first thing that you have to do is to make sure that your hardware will successfully enter the pairing mode. To do this, you need to follow these steps: Download the App and Turn the Hardware On The steps will be as follows: 1. Download the Alexa App from the Google Play Store (Android) or the App Store (iOS). A Guide on How to Connect Alexa to iPhone Easily2. After it finishes downloading, launch the software and login using your Amazon credentials. 3. Turn it on by plugging it into an outlet using the Power Adapter. If the light ring turns blue, it means that it is turning on. 4. After turning blue, it will turn orange and that is the signal that Alexa is going to greet you. You have successfully downloaded the software needed and you have activated the hardware. What do you do next? Connect to Wi-Fi After successfully downloading the app and turning it on, the next step that you need to do is to connect it to Wi-Fi. 1. From there, go to the left-hand side and choose Settings 2. On the app, choose your Echo Dot device and click on Update Wi-Fi 3. Simultaneously, on your device, you need to press and hold Action for about five (5) to seven (7) seconds. 4. A list of Wi-Fi networks will appear, select your network to connect it. NOTE: Connect it to the Wi-Fi network where your other gadgets are connected. It might cause certain errors if they are from different networks. Enter Pairing Mode For your new speakers to enter pairing mode, you have to: Go to the Alexa App and hit on SettingsAfter doing so, choose your Dot > Bluetooth > Pair a New DeviceWhen you select this option, it will now enter pairing mode Now that you have learned how you can enable this functionality, how would you connect it to other devices such as your mobile phone, your laptop or PC, or to another wireless speaker? Alexa Responds but No Sound? Here's How To Fix?How to Connect Alexa to Your Phone So how do you pair it with your phone? What are the steps you need to take to be able to successfully link your two devices together? Step 1. Make sure that your phone is within the range or the vicinity of your speaker Step 2. Turn on the Bluetooth on your phone. Make sure that it is "discoverable" Step 3. On the Alexa app, click on the Settings Panel and click on Pair a New Device Step 4. Make sure that you have chosen the correct Echo Dot for pairing (if you have multiple devices) Step 5. Once successful, Alexa will give you the confirmation. Step 6. She will even say that the next time you want to connect, you just have to say "Alexa, connect to [Your Device]" How to Connect it to Your Laptop or PC Should you want to use your virtual assistant as your speaker to your laptop or your computer, we got you! Follow these simple steps and seamlessly link your devices together: Step 1. Make sure that your laptop or your PC is within range or the vicinity of your speaker Why My Amazon Echo Won't Connect To Wifi?Step 2. Turn your computer's Bluetooth functionality on and make sure that you make "discoverable" Step 3. Select the option that says Add Bluetooth Device Step 4. Login to your Alexa account Step 5. On the Settings Pane, which can be seen on the left-hand side, select your Echo device Step 6. Click on the Bluetooth option Step 7. Choose Pair a New Device Step 8. Go back to your computer's Bluetooth panel and choose your Echo Device. How to Connect it to Your Bluetooth Speaker Can you actually link it to another Bluetooth speaker? Yes, you can! A lot of people do this for a couple of reasons which include: FlexibilityThey will be able to take the other wireless speaker wherever they goAmong Others To connect it to your wireless speaker: Enable your wireless speaker's Pairing Mode.From your phone, tablet, or your PC, open the Alexa App or the Alexa Web Version.Click on Settings and go to Bluetooth.Hit on Select Devices and choose your Alexa hardware.Since your Bluetooth speaker is in pairing mode, it will be discoverable by your virtual assistant.Choose your Bluetooth Speaker from the list of hardware that you haveAlexa will confirm the connection and will tell you that you will be able to enable it using voice command the next time. How To Put Alexa To Sleep Mode?[With Pros & Cons]Conclusion Solving your problem of how to put Echo Dot in pairing mode is not actually rocket science. Once you know what to do, it will be a lot easier for you to do it. You do not need to be a tech whiz to solve it; neither do you need to contact Amazon's support team to help you. With this guide, you will get everything you need to pair or connect Alexa to any of your devices at home! How can I connect my Amazon Echo Dot to my HEOS speaker via Bluetooth? To connect the Echo Dot to HEOS speaker via Bluetooth: Step 1. Enable Bluetooth pairing mode on your HEOS speaker We have 2 series of HEOS speakers, HS1 and HS2. HEOS HS1 speakers require a USB Bluetooth adapter (Sold Separately) for Bluetooth connection. HEOS HS2 speakers have built-in Bluetooth functionality. The procedure for Bluetooth pairing is slightly different between HEOS HS1 and HS2 speakers. Since both speakers are very similar in appearance you will have to first determine the HEOS device version. The HEOS HS1 speakers will have a "Reset" button on the back panel, and the HEOS HS2 speakers have a "Bluetooth" button instead. Step 2. Bluetooth Setup HEOS HS1 Series: Use the USB Bluetooth adapter included in the HEOS1 Go Pack or buy USB Bluetooth V4.0 adapter using BCM20702 chipset from Broadcom. Note: We do not guarantee HEOS Bluetooth functionality with every Bluetooth adapter incorporating this chip. Procedure: HEOS HS1 Series - Plug the USB Bluetooth adapter into the USB port on the back of your HEOS speaker. HEOS HS2 Series - Skip to step 3 Step 3. Starting Bluetooth pairing mode on the HEOS Speaker HEOS HS1 Speaker - Press and hold the "Connect" button on the back of the HEOS device for approximately 5 seconds until the front LED flashes "GREEN" rapidly. This sets the HEOS speaker to pairing/discovery mode so that your Amazon Echo Dot can find it. HEOS HS2 Speaker - Press and hold the "Bluetooth" button on the back of the HEOS device for 3 seconds and release when the HEOS status LED starts a two "GREEN" flashing pattern. This sets the HEOS speaker to pairing/discovery mode so that your Amazon Echo Dot can find it. Step 4: Open the Alexa app and select Settings Select your device, and then select Bluetooth > Pair a New Device. Your Echo Dot enters pairing mode. When Echo Dot discovers your Bluetooth speaker, the speaker appears in the list of available of devices in the Alexa app. Select your Bluetooth speaker. Echo Dot connects to the speaker and Alexa then tells you if the connection is successful. In the Alexa app select Continue. Your Bluetooth speaker is now paired with your Echo Dot. If you want to play audio from another device on your Bluetooth speaker, say "Disconnect." Amazon's Echo smart speakers are best known for the Alexa voice assistant that powers them, but they can also function like any other Bluetooth speaker to play music, podcasts and other audio programming from your smartphone, tablet and other Bluetooth-enabled devices. Not only does this bolster the quality of your audio, but it also allows you to source services that remain inaccessible by Alexa, including Apple Music and popular podcast apps. The Echo Tap does not support Bluetooth pairing. Not all Echo smart speakers offer superior sound quality, however. The Echo Dot is best for engaging with Alexa and receiving spoken audio updates rather than listening to music. The second-generation Echo can supply quality sound to a small or medium-sized room. And the Echo Plus is quite robust for any room. Echo speakers can be synced to boost volume collectively, but Multi-Room Audio is not supported for Bluetooth connections. This is due to limitations of Bluetooth technology rather than a shortcoming of Amazon. While limited, Alexa's control of your Bluetooth audio source is not completely absent. Generally, she'll retain the ability to play, pause, stop, skip forward and backward, and adjust the volume, among other basic functions. And of course, she'll coordinate the Bluetooth connection. Pair your Echo speaker with a Bluetooth-enabled device. To use your Echo device as a Bluetooth speaker for your smartphone, tablet or other Bluetooth-enabled device, follow the below steps. Ensure your device is in range of your Echo speaker. Disconnect any existing Bluetooth connections with the command, "Alexa, disconnect." Set your smartphone, tablet or other device to Bluetooth pairing mode. Set your Echo device to pairing mode with the command, "Alexa, pair." She'll confirm with, "Searching..." On your phone, tablet or other device, select your Echo speaker under Bluetooth settings. Alexa will announce the successful connection. Having configured the connection, you can reinitiate it any time the devices are in range, with Bluetooth, active by issuing the command, "Alexa, pair with [Device Name]" or "Alexa, connect to [Device Name]."
