How to have longer battery life on android

How to get long battery life on android. How to last battery longer android. How to keep your battery life longer android.

Android: the default Android battery icon is quite small and does not give you a good idea of how much the battery you left. The load bar puts a thin line at the top of the menu bar, offering a much more accurate representation of the battery charge. The load bar is located the MIUI locking screen battery indicator, which is a composed way to see the battery charge at a glance. The charging bar essentially puts a thin line at the top of the screen (or, if you prefer, below the menu bar or at the bottom of the screen), showing the battery you left. You can change its color, thickness and animations, as well as hiding it in the full screen apps. It is completely free, and it is worth using, if you are tired of trying to judge as Icon Battery Tiny Battery Android is.Celebarbar is a free download for Android. CompliBar | Android Market Via Droid Life If you have a modern Android phone, you know the pain to turn on your phone at 17:00 only to realize that it is deep in a low battery coma. Here are the simple manual changes and the clebre automatic changes, which will keep your phone awake and useful for much longer. There are many different things that can kill your phone's battery, and they are often things you don't even need. We mentioned some of these first, but if you are having serious problems of battery life on your phone, make sure you check each of these settings, features and customizations to make sure you get the best battery life possible out of your phone. The functionality that draw the PowerThere battery are some settings and functionalities of the phone that drains the battery life, sometimes without even even even doing it. To see what I mean, head to settings> Information about the phone> Battery> Using the battery. You could see some things there you didn't understand that they were killer battery. Here are the settings that have most likely killing the battery and how to turn them when you don't need it. Your ScreenPhoto of Kevin Jarrett. Screen, especially if it is one of the new bei super-amoled or super LCD displays, much draws the battery more than your device. The best way to minimize the use of the screen battery is to lower the brightness. By default, your phone should be on the "car" brightness, which works, but it could still use more juice than you want. If you turn to Settings> View> Brightness, you can deselect "automatic brightness" and put it on something like 10%. It will be a little harder to see in direct sunlight, but you will be better everywhere. Putting the power supply control widget on the home screen makes it even easier to switch from a low and high brightness much easier, so it's a widget that I highly recommend using if you don't already. To add it, press and hold an empty section of the screen, select Widget and select the Power Control option. Also recommended to lower the screen timeout from 1 minute to 15 or 30 seconds in Settings> View. If you tend to let the phone dry automatically (rather than hit the sleep button when you're done using it), this will help you save a certain life. Fortunately one of the biggest killers of the battery "especially if you live or work with the wrong service - is your mobile and data connection. Whether you have a new 4G fantasy phone or a standard 3G unity, your data will use the Battery even if you are not actively using the phone. You probably use the mobile phone as a main telephone line, and moment that is with you all the time, A € ¤ ¤ ¤ "greater it is possible to activate and deactivate the data connection using the previously mentioned apndroid quick settings or previously mentioned. Enable / deactivate mobile data when you need it, Turn it out when you don't. If you're just thinking of talking, send messages or sending a fast email, a board or 1x is more than enough. You can activate the data when you're leafing down and need additional speed. It looks extreme, but you will save you quite a lot of juice.android: from the last experience, we previously labeled Android Android app Like a crucial ... Read in a practical way, these apps only work with GSM phones (AT & T and T-Mobile in the United States); CDMA phones (such as those on Sprint or Verizon) are left out. Some phones can deactivate 3G from Settings> Wireless and networks> Mobile networks, but others will have to go the most complicated route. Sprint users can also deactivate 4G with the previously mentioned Power Control Plus widget, while Verizon users can deactivate 4G with LTE Onoff App.Android: we sang the Android power control widget praise on more than one occasion , but ¤ ¤ ¤ | Marewi-Fienien you have wi-fi networks around, use them. Automatically turned off the data connection and use Wi-Fi, which is better for battery life compared to cellular data. However, when you are not around Wi-Fi, you actually download your battery constantly looking for the networks to connect to. In addition to a few locations of choice, I don't use Wi-Fi connection much except at my house - so you will bring you the Wi-Fi with the power control widget when they are out and about. Bluetoothbluetooth Bluetooth on the Kills battery just like Wi-Fi does. If you do not use a Bluetooth headset, disable bluetooth entirely. Once again, you can activate and deactivate it from the power control widget, then on the occasions you use a Bluetooth headset or transfer files to Bluetooth from your computer, you can activate it quickly to the right from the home.gseveryone screen on the GPS As a huge killer killer, but it's probably not as bad as others since it is unlikely that you are always using it. GPS lights up only (and download the battery) when you use it for something, like Google Maps or swivel navigation in turn. Of course, if you use localization services with Twitter, Facebook or other social apps, then it could have become more often than you realize. Like the others, it can't hurt to deactivate this one off using the power control widget when you're not using it, and then turn it on when it's time to use Google Maps.How to automate these course settings, activate the settings on And off all the time is not an ideal telephone scenario that lets you feel like you live in ¤ ¤ ¤
